Medhansh Garg | Computer Engineering @ UIUC

<u>Linkedin</u> <u>GitHub</u> <u>Portfolio</u> <u>Email</u> <u>Phone Number</u>

Education

University of Illinois, Urbana-Champaign — BS, Computer Engineering | August 2023 - May 2027 (Expected)

- Relevant Coursework: Data Structures, Discrete Math, Linear Algebra, Electronics, Probability, University Physics

Skills

Languages: C, C++, Python, JavaScript, TypeScript, Java, SQL, HTML/CSS **Web & Frameworks**: React, Next.js, Flask, Spring Boot, Tailwind CSS, Node.js

ML & Tools: TensorFlow, PyTorch, Pandas, Tesseract.js

DevOps/Security/Systems: Docker, Kubernetes, Linux, Git, GStreamer, Firebase, WebRTC, Vercel, BurpSuite, Nmap, Frida

Hardware/Embedded: ESP32, Raspberry Pi, Arduino, Qt, MQTT

Certifications

NYUx MicroBachelors Certification in Cybersecurity Fundamentals | April 2023

- Completed 9-course program (A grade) covering auth/access control, network security, and penetration testing

Work Experience

Care Health Insurance, Gurugram — Cybersecurity Intern | June 2025 - Present

- Enumerated **60+** internet-exposed services across **4** domains using **Nmap**, **fuzzing**, and **custom scripts**; produced a triaged remediation roadmap for the SOC
- Replicated WAF request-signing to demonstrate **replay-attack risk** and **forged-call feasibility**; delivered **PoC** and mitigations to SOC via responsible disclosure

Sigpwny, Cybersecurity at UIUC — CTF & Badge Development Team | January 2025 - Present

- Working with **embedded systems** + **PCB design** to engineer DEFCON-style PCB badge featuring **ESP32** integration and SAO compatibility
- Co-designing CTF challenges for annual UIUCTF

IoT++, Remote — Intern | June 2024 - August 2024

- Optimized **YOLO** fire/human detector to **13×** throughput and **+62%** accuracy via pruning, tiling, and NPU-aware quantization; deployed on **Orange Pi** with **GStreamer**
- Containerized inference and pipelines with Docker/Kubernetes/Minikube and Azure; built classical ML (RNNs, Random Forests) for routing + small RAG tool for internal data

Projects

AlberFlowy | June 2025

- Reverse-engineered WorkFlowy's private API to enable fast full tree browsing + CRUD operations via Node.js CLI
- Implemented Google OAuth2 with Puppeteer automated login + session capture to remove manual token handling
- Engineered **C++** Albert plugin with **tree caching**, **optimistic cache updates**, **autocompletion**, **timer-based refresh** to asynchronously sync changes

RemoteCam | March 2025 - Present

- Building cross-platform webcam streaming app using WebRTC with Firebase signaling and secure code-based pairing
- Developing mobile PWA frontend with Next.js, React, Tailwind CSS, and TypeScript for real-time camera streaming
- Implementing Linux desktop client in QtPython with GStreamer integration for virtual webcam output

Uplift, Illinois | February 2024

- Built cross-platform React Native app for hackathon; designed UI in Penpot under time constraints
- Integrated LangChain + OpenAl for contextual chat responses; used Tesseract.js for OCR

Athletic Court Booking System | September 2022 - January 2023

- Built full-stack court booking app (React, Spring Boot, SQLite) used by 300+ apartments, reducing manual errors
- Designed UI/UX in Figma and later ported frontend to React Native; received 85% positive user feedback
- Developed user portal with real-time conflict prevention + updates using industry-standard polling techniques
- Developed admin dashboard to streamline booking management

Research Experience

Independent Research, Shobhit University — Author

- Authored research on Leet Speak's impact on password security (834K+ samples); published with 13 references
- Used Hashcat, zxcvbn, and entropy metrics to assess password strength and inform policy recommendations
- Found that Leet Speak can increase password complexity, but has marginal impact on password vulnerability
- Proposed actionable recommendations for password policies to mitigate risks
- Published paper with 13 references: https://doi.org/10.32628/IJSRST229567
